👤 EXPERIENCES

Research Intern, Wechat Search, Tencent

2024.12 – Now

Research on improving LLM inference performance in RAG scenarios. Proposed Bullet, a method enabling single-GPU PD-disaggregation via temporal-spatial sharing, deployed online and validated through mirrored traffic tests to outperform existing approaches in both latency and throughput. This work has been accepted by ASPLOS 2026 (acceptance rate: 10.6%) and presented at the SGLang Beijing Meetup.

Teaching Assistant, Compiler Principles, Sun Yat-sen University

2023.03 – 2023.07

Teaching assistant of undergraduate course, implement a compiler for a subset of C language. Introduce LLVM framework in class and release programming homeworks.

Backend Develop Intern, Wechat Pay, Tencent

2021.07 – 2021.09

Build a Django-based Wechat robot to manage backend testing issues from develop team. Add features to access Tencent's TAPD project management system.
